Na nivou Federacije BiH, 7-dnevna incidenca iznosi 0,5 slučajeva /100.000 stanovnika. U posljednjih sedam dana, višu incidencu od prosječne zabilježene u Federaciji BiH ima Zeničko-dobojski kanton. Rezultati antigenskih testiranja nisu uključeni u ovaj izvještaj, te stoga ne prikazuje realno stanje epidemiološke situacije. S obzirom na lakšu dostupnost, brže rezultate testa i nižu cijenu testiranja, većina zdravstvenih ustanova se odlučuje na testiranje RAT (brzi antigeni test), iako ZZJZFBiH u svojim preporukama navodi da je u situaciji niske cirkulacije virusa SARS-CoV-2 u zajednici pouzdanost RAT značajno smanjena i preporuča se testiranje PCR-om.

U proteklih 7 dana zabilježen je jedan smrtni slučaj.

*In the Federation of Bosnia and Herzegovina, 7-day incidence is 0,5 cases/100,000 population. In the last seven days Zenica-Doboj Canton, have a higher incidence than average recorded in the Federation of BiH. The results of antigen testing are not included in this report, and therefore do not show the real state of the epidemiological situation. Given the easier availability, faster test results and lower cost of testing, most health care institutions opt for RAT (rapid antigen test), although ZZJZFBiH states in its recommendations that in a situation of low circulation of SARS-CoV-2 virus in the community the reliability of RAT significantly reduced and PCR testing is recommended.*

*1 case of death was reported in last 7 days.*
